

## Are We Really Giving Our Students the Education They Deserve?

Government schools are meant to be the foundation of equal opportunity. Yet, across many classrooms, students often face a lack of active teaching. Instead of interactive lessons, learning sometimes takes a back seat—leaving children unprepared for the future.

Recently, during my voluntary teaching work in a government school, I asked a child about his Social Science syllabus. He listed the chapters, so I followed up: “*Did your teacher cover these in class?*” His reply was simple yet troubling: “**Madam aate hain, phone chalate hain aur chale jaate hain.**”

*(The teacher comes, uses their phone, and leaves.)*

This story is not unique. Many children share similar experiences. Of course, there are countless passionate and hardworking government teachers. But systemic issues like overcrowded classrooms, outdated teaching methods, and sometimes disengagement can overshadow their efforts.

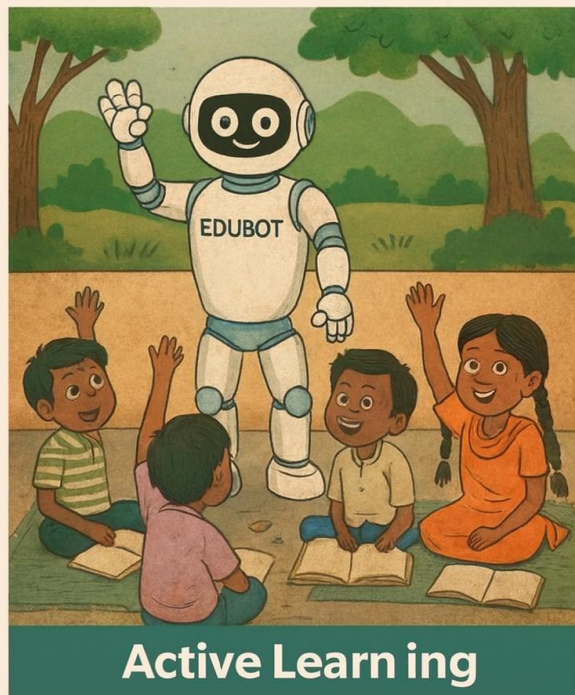

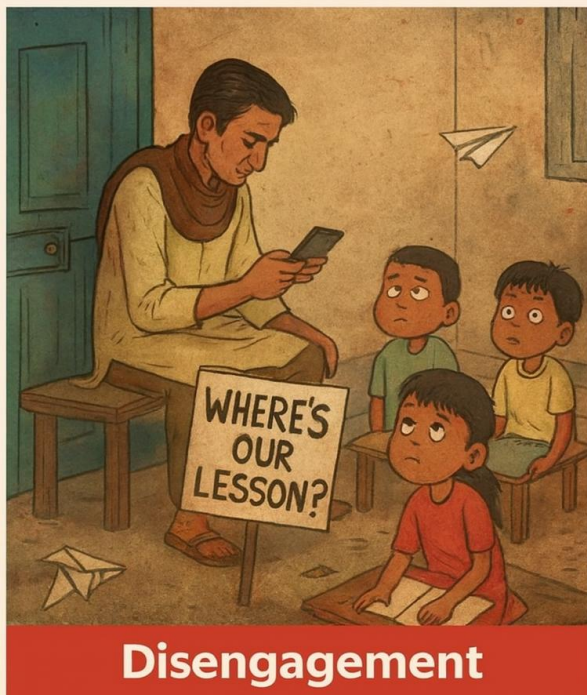

This raises an important question:

👉 *If students don’t receive proper guidance, how can underprivileged children ever access the quality education they deserve?*

### What Needs to Change

- Stronger **accountability and monitoring** in classrooms
- **Training programs** that reignite passion for teaching
- **Support systems** that reduce teacher workload
- A shared recognition that **education is more than a profession—it’s a responsibility**

## 👉 When teachers scroll, who teaches our children?

*When teachers scroll, who teaches our children?" Disengagement vs Active Learning with EDUBOT)*

### A Ray of Hope: EDUBOT

At **PredictML.ai**, we are working to bridge this gap with **EDUBOT** – a humanoid teaching assistant. EDUBOT delivers lessons in Science, Math, and English, engages students with rhymes, puzzles, and interactive Q&A, and ensures learning continues even when teachers are stretched thin.

Importantly, EDUBOT is **not a replacement for teachers**. It is a partner—supporting educators while bringing **equity in education** to rural and underprivileged communities.

### Moving Forward

The future of education lies in combining **human commitment** with **AI-powered consistency**. Together—with accountability, training, and innovative solutions like EDUBOT—we can ensure every child gets the education they deserve.
